

Should We Conserve Natural Resources?

by: Ashley Marie Cawood

First, I thought that we should conserve our natural resources because we would breathe dirty air and get unhealthy also we would have dirty water.

Then, I learned that 81% of landfill trash can be recycled. After watching the 'Nature is speaking' video, I realized that nature doesn't need people. People need nature and water isn't just water, soil isn't just soil, a flower isn't just a flower, and a forest isn't just a forest it is much better.

Now, I think that I am putting all my information together that I came up with. I learned lots of stuff and I came up with this, you probably think kids can't do much but you're wrong. Kids can help. Please stop to make the Earth a better place and help plants grow for us to eat and give us clean oxygen to breathe.
