

# Should we conserve natural resources?

First I thought we should conserve natural resources because like everything we have is made out of natural resources and ~~that is why~~ I think we should conserve natural resources.

Then I learned that 81% of landfill trash can be recycled. According to the video "Nature is speaking" I learned that if we use all the dirt up in the world we will die. After reading "A way to help planet Earth" I learned that a lot of our trash comes from plastic.

Now I think we should conserve natural resources because if we use up all of the things we need we will die. and that is why we should conserve natural resources.
