Should we conserve natural resources

First I thought...

If we didn't conserve natural resource we would die.

Then I learned...

alot of things we use can be recycled, 50% of landfills can be recycled. After watching the nature is speaking video I realized that we need forests to live. After reading a way to help planet Earth I learned that everyone can recycle even kids.

now I think...

We should help natural resources because if we have too many landfills and trash we would have dirty air and dirty water.
