# Should we conserve natural resources?

First, I thought we could conserve our natural resources because if we did not have any trees we would not have any thing alive.

Then, I learned we can't recycle anything with a 5 or a 6 on it and according to the video "Nature is Speaking" I learned that nature does not need people people need nature and after reading "a way to help plant Earth" I learned that too much plastic is one of our worst trash problems.

Now, I think that its important to protect our earth because every thing would die out.
