The article "Video Games Are Good For You" argues that kids are better adjusted. Games have areas where the player has to solve a lot of different situations and problems. They had fewer conduct problems, and care for each other. This is important because parents don't want their kids not being adjusted well and don't want them to have a lot of conduct problems and they do want their kids to care for each other.

According to Daphne Bavelier, a brain scientist, "playing first person point of view action video games affects several aspects of perception, attention and cognition." I think this is true and it is helping kids who play these games very well. I also think it does approve your attention. This approves your attention cause like in Call Of Duty Black Ops 2 the player has to pay attention to his/her environment and how the enemy players can enter that building they are camping and sniping in.

Many people may believe video games are bad for you when actually it has very little negative effects and quite a bit of positive effects. There are some bad things of video games like if you were to play for weeks straight. However, research shows it improves following instructions, planning, resource management and logistics. It also improves social skills.

This is what I believe, I play Grand Theft Auto online with my friends, and I say it improves everything you need to be successful in life. To be successful in life you have to have good attention, tracking, memory, etc. Video games are good for you.

"Illustrating" Check

Did you use specific examples from the text to support what you want to say?   Yes or No

"Authorizing" Check

Did you quote an expert or use the credibility or status of a source to support your claim? Yes or No

"Countering" Check

Did you" push back" against the text in some way?   Yes or No

"Extending" Check

Did you put your own "spin" on terms and ideas?   Yes or No
