~~Should we conserve natural resources~~

First, I thought if some guy chopped down the last tree on the U.S.A. Then everyone would sadly die. I learned that 8% of landfill trash can be recycled.

Then I learned After watching the "Nature Is Speaking" video I realized that the tree video the tree said humans are smart because of their big brains. After reading "A Way to Help Planet Earth" I learned that we can recycle more than throw away.

Now I think that we should not pollute. Or the water would get nasty. Ewwww. And besides we eat, drink, wash, bathe, swim, cook, relax. Allll those things we use water to get the product.
